and autoimmune diseases.
```

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the

cc prophylactic agent as well as for screening purposes. (I) is useful for cc diagnosing diseases characterised by dysfunction of their associated cc protein of interest, for identifying normal or abnormal proteins of cc interest, as a part of diagnostic kit to detect the presence of their cc proteins of interest in a biological sample. Additionally, (I) is useful cc for treating inflammatory and autoimmune diseases, tumour growth, cancer, cc infertility, and neurological degenerative diseases, tumour growth, cancer, cc red blood cell levels such as anaemia. The TPO-minetic comprising EPO-cc mimetic compounds are useful for treating disorders characterised by low cc red blood cell levels such as anaemia. The TPO-minetic comprising cc compounds are useful for treating conditions that involve an existing cc deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic cc tumour which result in thrombocytopaenia, systemic lupus erythematosus, cc and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777 represent amino acid and nucleic acid sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

```

This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which

This invention relates to CHI deleted mimetibodies (and the DNA sequence which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, antibacterial, virucide or fungicide activity. In addition, the discloss sequences may prove useful for gene therapy. The CHI-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell,
                                                                                                                                                                                                                                                                                                                         New CH1-deleted mimetibody polypeptides and nucleic acids, useful for modulating, treating, alleviating, preventing an immune, cardiovascular, or neurodegenerative disease or disorder, anemia, cancer, or infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                            ; IGM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/ or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, cardiotatic, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is an SH3 antagonist peptide sequence used to make a mimetibody of the invention.
                                                                                                                                                                                                                                          Claim 3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-JUN-2002; 2002US-0392431P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               27-JUN-2003; 2003WO-US020347

The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CH1 deleted mimetibody, such as a bone or joint, cardiovascular, dental or oral, dermatological, ear, nose or throat, cendocrine, metabolic, gastrointestinal, gynaecological, hepatic, obstetric, heematologic, immunological, allergic, infectious, musculoskeletal, oncological, neurological, nutritional, ophthalmologic, pediatric, psychiatric, renal or pulmonary disorders. The present generate is that of a peptide which may be used during the creation of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                     AAW11098-W11124 are peptides that bind to the Src SH3 domain. The SH3 binding peptides are useful in modulating signal transduction pathways the cellular level (especially protein tyrosine kinase-mediated), modulating oncogenic protein activity, or providing compounds for the development of drugs with the ability to modulate broad classes, as well as specific classes, of proteins involved in signal transduction and all the specific classes.
                                                                                                                                                                                                                                                    Peptide with binding affinity for Src proteins - useful for e.g. modulating cellular level, esp. protein tyrosine

                                                          AAW16924-W16948 are random recombinant peptides derived from one of three peptide libraries, T9, T12 and R8C. The peptides are all SH3 domain-binding peptides. SH3 binding peptides are useful in modulating signal transduction pathways at the cellular level (especially protein tyrosine kinase-mediated), modulating oncogenic protein activity, or providing compounds for the development of drugs with the ability to modulate broad classes, as well as specific classes, of proteins involved in signal transduction and also for regulating the processing, trafficking or translation of RNA. Conjugates of the peptides with detectable labels or imaging agents are useful for imaging cells, tissues and organs in which src or Src-related proteins are expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Conjugates of the peptides with detectable labels or imaging agents are useful for imaging cells, tissues and organs in which Src or Src-related proteins are expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                src; SH3; Src homology region 3; binding affinity; oncogenic

                                                                                      á
                                                                                                                                                                                                        The present sequence represents a random peptide recombinant isolated by the method of the present invention. SH3 (Src homology region 3) binding peptides are selected from: (a) peptides which bind the SH3 domain of peptides which bind the SH3 domain of Nck; (c) peptides which bind the SH3 domain of Nck; (c) peptides which bind the SH3 domain of PhC gamma; (f) peptides which bind the SH3 domain of PhC gamma; (f) peptides which bind the SH3 domain of PhC gamma; (f) peptides which bind the SH3 domain of STC gamma; (f) peptides which bind the SH3 domain of Yes; and (i) peptides which bind the sH3 domain of Yes; and (i) peptides which bind the sH3 domain of Yes; and (i) peptides which bind the sH3 domain of Yes; and (i) peptides can be used in the method to identify inhibitors of their binding to their respective SH3 domain, which could be used to modulate the pharmacological activity of proteins or polypeptide containing the SH3 domain. The peptides can also be used to activate Src or Src-related protein tyrosine kinases, to stimulate the immune response by increasing the production of certain lymphokines, e.g. conjugated molecule to certain cellular compartments containing Src or Src related proteins
                                                                                                                      Query Match

                                                                                                                                                 presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                             polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the

                                                                                                                                                                       cc encoding a Propionibacterium acnes protein. The invention also relates to college polypeptides encoded by the polypucleotides (ABM35624-ABM6436) and to clammunogenic fragments of P. acnes polypeptides. The invention and to cadditionally encompasses expression vectors and host cells comprising a comprising a polypeptide of the invention; fusion proteins comprising a polypeptide of the invention; a comprising proteins proteins of the comprising relations or across the polypeptide of the invention; a complete the invention; a comprising relations or across in a complete the proteins of proteins or cells prepared comprising proteins. The polypeptides, fusion proteins, and a method is a vaccine composition (comprising P. acnes in a companied proteins and a method for inhibiting the presence of P. acnes in a companied proteins. The proteins polypeptides, polypucleotides, antibodies, fusion proteins. The proteins or antigen-presenting cells that express the polypeptides are useful for inhibiting the development of P. acnes in a companied proteins. The polymucleotides are natigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acnes composition. The polymucleotides can also be used as probes or primers for composition of an immune response specific for a P. acnes composition is useful for the composition is useful for the primated proteins. The present composition assay. The present composition of an immune response or for treating acne, and the kit is useful for performing a diagnostic assay. The present composition when the primated specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences

cc encoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated containing the polypeptide or its fragment whose expression is inhibited by the containing the polypeptide; (6) inhibited by the containing the polypeptide; (6) inhibited by the containing the polypeptide; (6) inhibiting cellular containing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway contained for proliferation, or that inhibits cellular proliferation; (8) contained for proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound station of an organism activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent contains; or (13) identifying the target of a compound that inhibits the contains; or (13) identifying the target of a compound that inhibits the contains; or (13) identifying the target of a compound that inhibits the contains; or (13) identifying the target of a compound that inhibits the containing proteins or screening for homologous nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational containing the proliferation of an organism. The antiense nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target provision of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                    Miao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to a novel isolated nucleic acid molecule comprising a sequence that encodes a thioesterase or thioesterase domain derived from a bacterial daptomycin biosynthetic gene cluster. The proteins of the invention have antibacterial, fungicide, virucide, antiparasitic, immunomodulator, antilipenic, and cycostatic activity. The polynucleotides may have a use in gene therapy. The compositions and methods of the present invention are useful for generating novel linear and cyclic peptides and improving yield of a product in a cell expressing the present invention are useful for generating novel.

Isolated nucleic acid molecule from a bacterial daptomycin biosynthetic gene cluster encoding a thioesterase or thioesterase domain, useful for generating novel linear and cyclic peptides, and products in a cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           compounds or in producing new compounds, such as antibiotics, antifungals, antivirals, antiparasitics, antimitotics, antifungals, antivirals, anticholesterolemic agents, siderophores, immunomodulatory agents, anti-cholesterolemic agents, siderophores, agrochemicals and cytostatics. The sequence represents a S. roseosporus daptomycin non-ribosomal peptide synthetase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibacterial; gene therapy; daptomycin biosynthesis gene cluster; daptomycin non-ribosomal peptide synthetase; DptBC; gram-positive bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                   the Streptomyces roseosporus daptomycin biosynthesis gene cluster, especially a daptomycin non-ribosomal peptide synthetase (NRPS) or its subunit, where the (NA) molecule encodes DptBC, and is not pRHHI59. The methods and compositions of the present invention are useful for treatment of a gram-positive bacterial infection of any organ or tissue in the body, including skeletal muscle, skin, bloodstream, kidneys, heart, lung and bone. This sequence represents the daptomycin biosynthesis protein DptA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptomyces roseosporus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptomyces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADJ72173;

                                                                                                                                                          The invention relates to Pseudomonas aeruginosa polypeptides and the complynucleotides encoding them. The sequences are useful in diagnosics and conditions, as molecular targets for diagnostics, complynavis and treatment of pathological conditions resulting from a compound, such as a polypeptide, compound, such as components of compound, as components of components of components of components for acruginosa drugs, as targets for antibacterial drugs, as targets for antibacterial drugs, as target components for diagnosis and/or treatment of p. aeruginosa-caused components for diagnosis and/or treatment of p. aeruginosa-caused components for diagnosis and/or treatment of p. aeruginosa caused components for diagnosis and/or treatment of p. aeruginosa caused components for diagnosis and/or treatment of p. aeruginosa sequences ABO67826-CC ABO84396 represent p. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed components for actions but was obtained in electronic format from USPTO at segulata.uspto.gov/sequence.html
                                                                   Matches
                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pseudomonas aeruginosa polypeptide #4936.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABO72761;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABO72761 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US6551795-B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pseudomonas aeruginosa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacterial

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB

[OHHC-domain-containing cysteine-rich protein
Name=ZDHHC1; Synonyms=Cl6orf1, ZNF377;
Homo sapiens (Human)
                                                                                                                                                                                                                                                                                                                                                                                        Putilina 7. Wong P., Gentleman S.;
Putilina T., Wong P., Gentleman S.;
"The DHHC domain: a new highly conserved cysteine-rich motif.";
Mol. Cell. Biochem. 195:219-226(1999).

-i- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

-i- TISSUB SPECIFICITY: Expressed at high levels in fetal lung, kidney
and heart. Expressed at lower levels in adult pancreas and lung.

-i- SIMILARITY: Contains 1 DHHC-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Strausberg
